

# Find your resources. Increase your assets.

## AgileTrac™ Asset Manager

One of the greatest expenditures in a hospital is its mobile medical assets — from simple patient beds to the most advanced diagnostic systems. Your staff, your patients and your revenues depend on using these valuable resources efficiently and effectively.

AgileTrac Asset Manager from GE Healthcare is a software solution that tracks every mobile medical asset in your inventory, and helps ensure proper cleaning, maintenance and compliance. So when you need it, it's there — ready and waiting. Your facility will gain both cost and care benefits:

- Reduced operational costs with less equipment rental
- Less missing or broken equipment
- Improved utilization of all equipment
- Faster equipment turnaround time; more streamlined patient care
- Improved maintenance, cleaning and compliance
- Complete data for real-time inventory management and capital planning

AgileTrac Asset Manager helps you make the most of your investments in mobile medical assets by ensuring optimal utilization and maintenance — for better business outcomes and better quality of care.

### Know what you have, where it is and when it's available.

AgileTrac Asset Manager uses Real-time Location System (RTLS) technology to track the status and location of mobile medical assets throughout your facility. Users can choose graphical maps, tabular views or detail views. Searchable data fields let you know equipment location, models, repair and service history, departments or room locations, asset numbers and more. Alerts are triggered if equipment leaves a specified area or a particular facility.

### Reduce rental costs.

If you can't find it, you can't return it. Delays like this cause unnecessary expense. AgileTrac Asset Manager tracks rental utilization by department, including details and dates due for return.

### Inventory rightsizing avoids overpurchasing.

Real-time tracking of mobile medical assets lets you control inventory expense by better managing inventory levels and locating items that are often hoarded, forgotten or misplaced. The system lets you pre-set target levels of inventory for timely replenishment of supplies. Complete inventory control across your enterprise also lets you take advantage of multi-facility inventory sharing.

### Better maintenance, cleaning and compliance.

Your staff and your patients need equipment that is clean, maintained and ready to use. AgileTrac Asset Manager provides alerts for preventive maintenance due dates, ensures cleaning protocol compliance and tracks all repairs. The system's centralized database provides a complete equipment and service history.

### Improve workflow.

Better use of equipment translates to better patient care and improved revenue opportunities. The AgileTrac system creates integrated requisition and workflow reports to track equipment usage and response time, helping you guide process improvement throughout your facility.

### Get the resources to improve your operation.

AgileTrac Asset Manager is part of a sustainable, flexible platform that integrates with your hospital information systems to help you track, maintain and allocate your mobile medical assets. Find out how to improve processes, lower costs and enhance the quality of patient care.
